

NETMANAGE COMPLETE

Who's got your back?

Team Networks works in a service agreement relationship allowing us to become your company's IT department. We limit the number of companies we work with so we can provide fast response times to our managed clients. Our NetManage clients pay a monthly fee that is reflective of the amount of service that is required to maintain the data network, ensure company hardware and software work properly and all critical information is backed up daily.

The NetManage Program is our comprehensive monthly service plan. Managing your network is like managing your business. It takes time, effort, expertise and planning to keep it up and running with maximum efficiency. When you engage Team Networks, we assist you with our trained and certified technical staff to support your day to day technical requirements. We are available on an "as needed" basis or predetermined scheduled visits for routine maintenance and other tasks that need addressed. And best of all, should your network server(s) ever experience a system crash, we will respond immediately. We also provide immediate assistance with our local help desk support technicians. The NetManage program reduces your cost of maintaining your technology with proactive management and allows budgeting for network support costs.

TEAM   
Better Solutions. Better Business.
