

REMOTE BACKUP

Want to keep your business afloat in a crisis?

Simplify the backup and recovery of your most critical systems, applications, and data. On-premises backups are slow and prone to errors or hardware failures. Team Networks Disk-to-Disk-to-Cloud (D2D2C) approach ensures online backups are fast, highly available, and efficient. Online backups are optimized to provide the fastest and most reliable recovery possible, all at a monthly cost even our smallest customer can afford.

Backups are encrypted in transit and stored online in hardened world-class data centers throughout the globe. Team Networks Backup's D2D2C approach provides redundancy and reliability, so backup and recovery is possible with or without an Internet connection. Also, we monitor the nightly backup to make sure it executes successfully and we perform periodic test restores to ensure your critical data is there when you need it most.

TEAM   
Better Solutions. Better Business.
